Limelight Networks' CDN Selected By NTT DOCOMO to Streamline Firmware Updates and Handle Unpredictable Traffic Spikes

TEMPE, Ariz., August 4, 2017 – Limelight Networks, (Nasdaq: LLNW), a global leader in digital content delivery, today announced that its Content Delivery Network (CDN) has been chosen by NTT DOCOMO, Inc., Japan's leading mobile operator.

The combination of a growing customer base and expanding file sizes greatly increased the demand on the company's internal networks. After extensive vendor reviews and internal testing, Limelight Networks' Orchestrate Platform was implemented by NTT DOCOMO to help meet new business requirements because it offered the best solution for fast, secure content delivery.

Limelight's architecture supports a high cache hit rate, which results in superior CDN performance for NTT DOCOMO. The architecture enables NTT DOCOMO to achieve a more efficient delivery system and easily handle unpredictable increases in file sizes and peak network delivery volume.

"Due to the large number of users we serve, it used to take a while to deliver file updates, but they take much less time now, which leads to a more satisfying customer experience thanks to Limelight Networks," said Motoi Minami, Manager of Product Innovation at NTT DOCOMO's Product Department.

A complete case study is available here with additional details.

About Limelight

Limelight Networks, a global leader in digital content delivery, empowers customers to better engage online audiences by enabling them to securely manage and globally deliver digital content, on any device.
